

Concept Map

Definition:

on demand delivery
of computing services
over the internet

Characteristics:

on demand self
service
→
Broad network
access
→
Resource pooling
→
Rapid elasticity
→
Measured
Service.

Cloud Computing

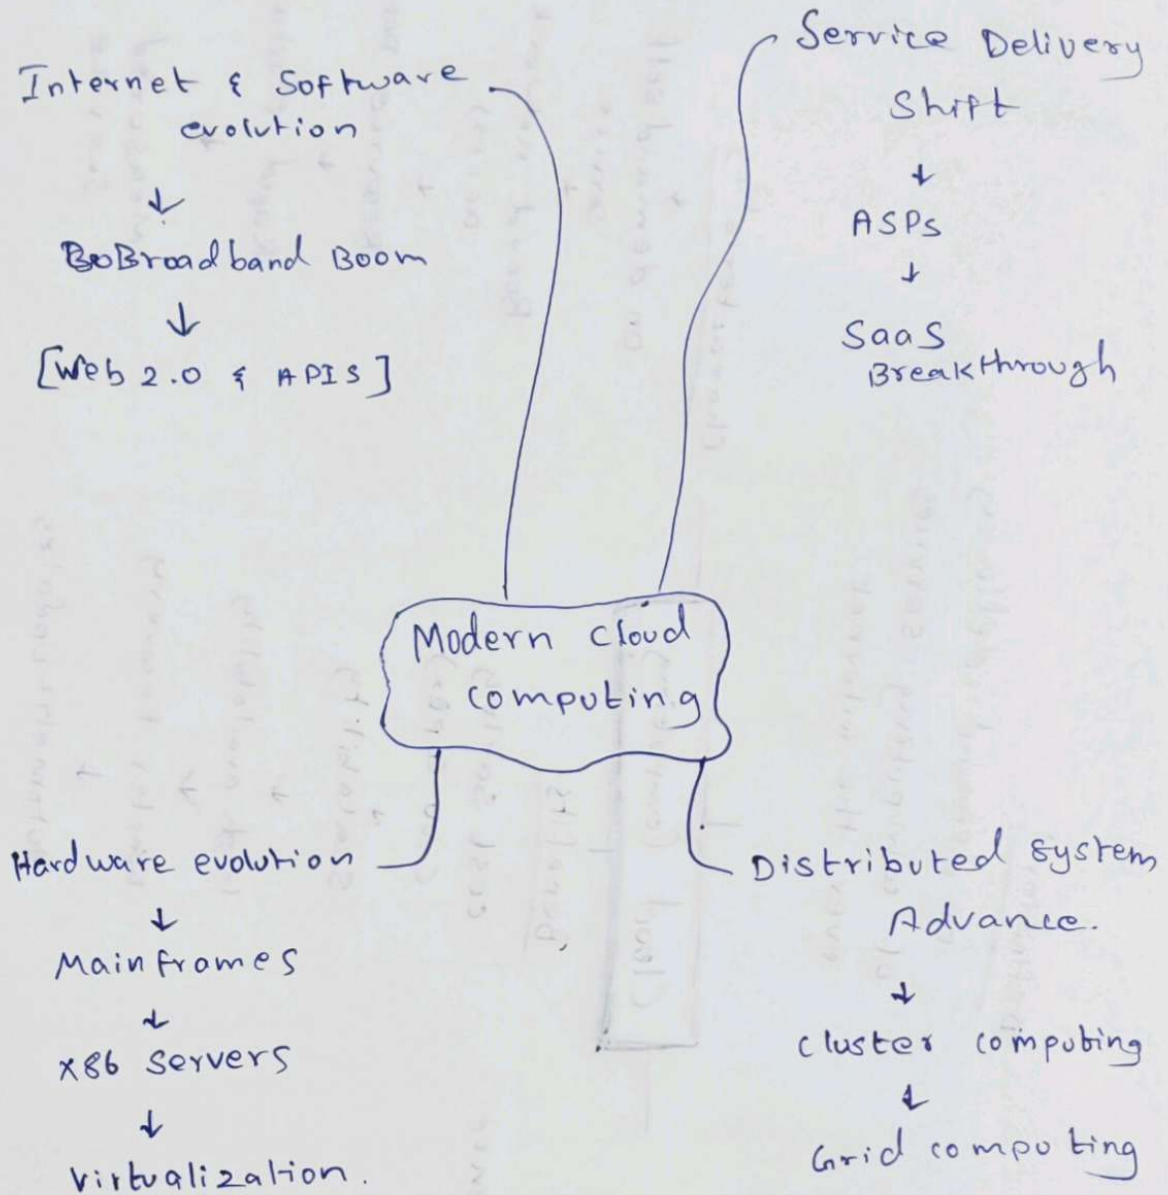

Benefits

cost saving
(No CapEx)
→
Scalability
→
High availability
→
Disaster Recovery
→
Automatic updates

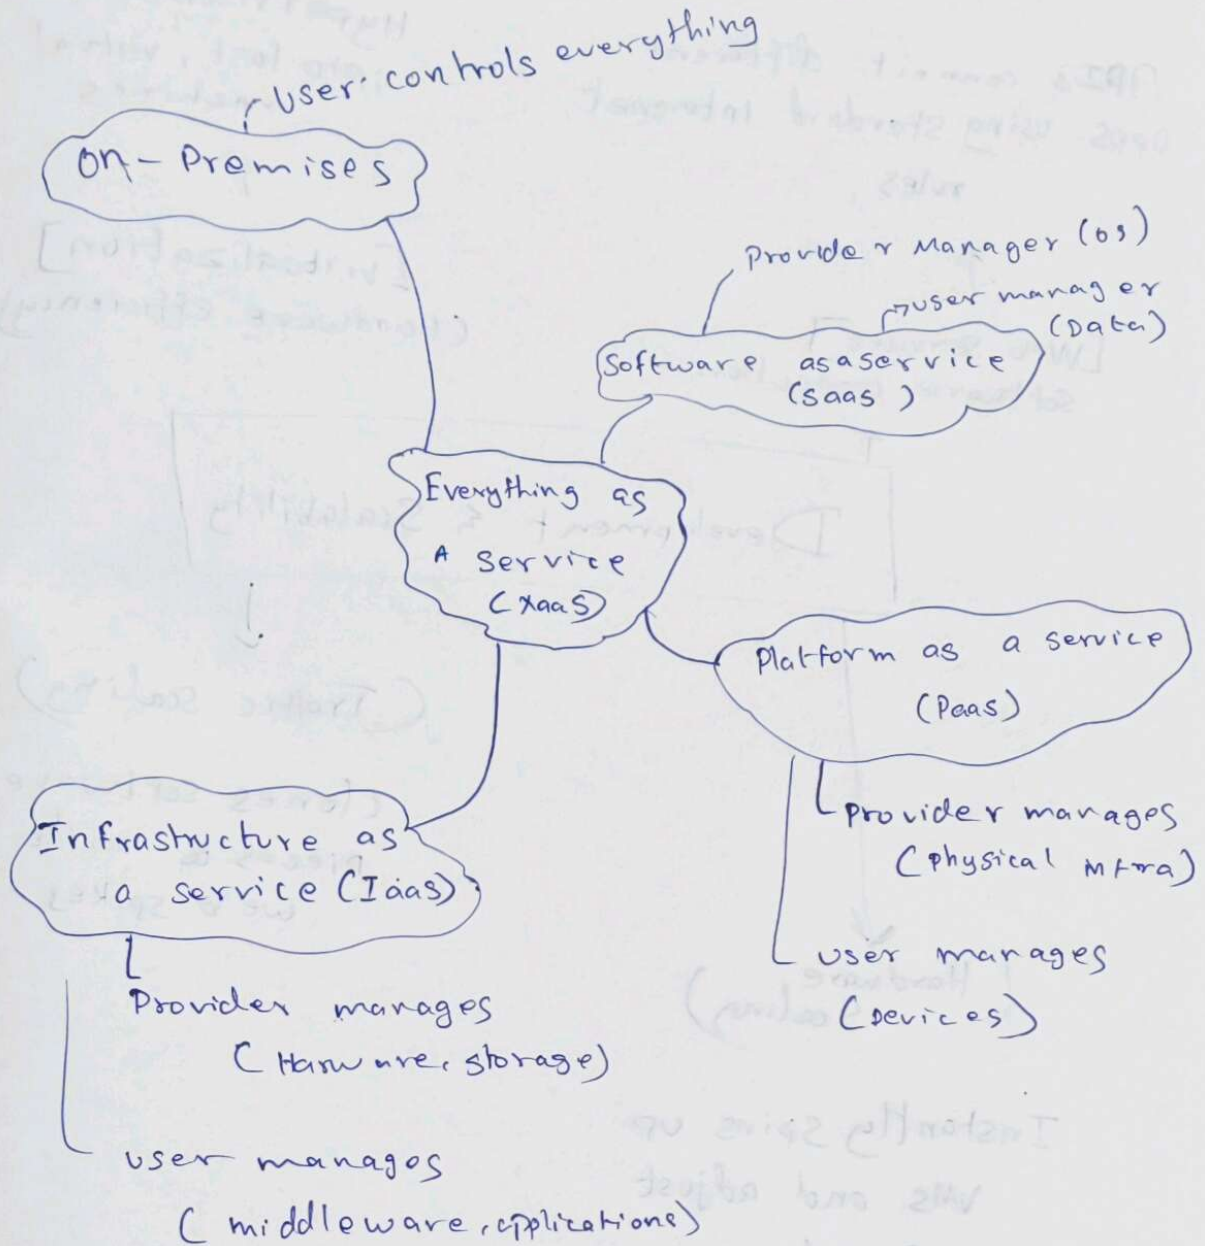

Limitations

Security risk
→
Internet dependence
→
Limited control
→
Vendor Lock-in
→
Downtime &
vulnerabilities.

Concept Map - 2

Concept Map - 3

Concept Map - 4

APIs connect different apps using standard internet rules

Hypervisors split servers into fast, virtual machines

↑
[Web services]
Software connection

↑
[Virtualization]
(Hardware efficiency)

Development & Scalability

↓
(Traffic scaling)

clones software pieces to handle web spikes

↓
(Hardware Scaling)

Instantly spins up VMs and adjust RAM / CPU
